

## Electrical / Electronic

1

PEP is a specialist in the manufacture of the high-performance precision mouldings demanded by today's fast-moving electronics industry.

From domestic consumer units through to industrial enclosures and precision connectors, PEP supports customers from initial product design through to consistent and efficient production. In addition, our added-value processing is designed to help customers achieve further efficiencies from their supply chain.

Our services for the electrical / electronic sector features:

- Comprehensive solutions from standard production mouldings to precision components
- Tolerances as low as 50 microns
- Expertise in high performance plastics such as PEEK, LCP and PBT
- Added-value processes including automated assembly on 3 and 6 axis robots and testing as required
- Insert moulding for strength, reduced weight or intergral electrical contacts
- 2 shot moulding
- Tampo printing
- ISO/TS16949:2009 accreditation
- Full in-house tool room facilities
- Conductive coatings

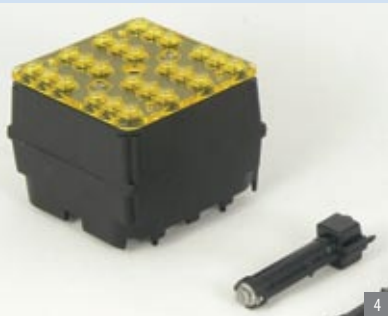

2

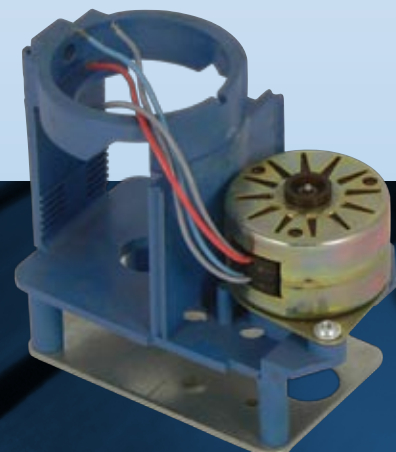

1. Components for an inkjet printer incorporating insert moulded micro-mesh filters
2. Various electrical / electronic components
3. Electrical assembly incorporating pad printing
4. LED housing assembly
5. Electrical assembly
